Phishing

Do you know how to avoid being hooked?

How many emails or texts have you received in which you were asked to click on a link to validate your account information or provide personal information? Were these legitimate messages?

Phishing scams masquerade as a trusted institution and are designed to trigger an immediate action.

Don't be fooled! Learn to recognize the telltale signs of an attack to protect both yourself and our organization.

Think Twice!

Vigilance and good judgment are your most important protection against phishing attacks.

Be the strong link!

- ☑ Never provide personal information in response to unsolicited messages and leave suspicious websites immediately.
- ☑ Be suspicious of any email or text message containing urgent requests or that promise money in exchange for personal or confidential information.
- ☑ Ensure your connection is encrypted before entering any personal information on a website. The URL address should start with https:// or show a padlock symbol.
- ☑ Always access sites the way you usually do and never through a link provided in an email or text message.
