COIT12207 Assignment 1 Specification

Problem

Social Innovation can be understood as "a new idea that works in meeting social goals". It is the innovation for better lives. The global pandemic, climate change, inflation, and clean energy are some of the current social issues around us. To explore better solutions, CQU researchers would like to gather some information from the general public about their views and thoughts. You are approached to help for developing the online survey forms for CQU's social innovation projects. The survey forms will be distributed online for information collection.

Requirements

Firstly you need to investigate and identify 10-20 survey questions (exclude participants' information) for one social innovation topic. The topic may be from the following list but is not limited to:

- Global pandemic
- Climate change
- Clean energy
- Equity in education
- Carbon emissions
- Obesity and happiness

Please note that the survey questions must be topic related and coherent. For example, if you select a topic on "Climate Change", all your questions should be relevant to "Climate Change".

The survey questions should take various types of Web Forms. That is, you should use different form elements (types) for the questions. You are required to incorporate the following elements into your form:

- Text field
- Select (dropdown list)
- Radio buttons
- Checkboxes
- Textarea
- Submit

Several reading references are provided at the bottom of this document. Please read them and get some ideas on social innovation projects.

Additionally, your survey form should include several mandatory elements to collect the participant's information. You are required to incorporate the following elements into your form (on the top of the survey form):

- Full name

- State (e.g., NSW, QLD ….)
- Email address
- Mobile Phone

These four elements should be validated on submission. Email and Mobile Phone area inputs should be validated in the correct format.

Other form elements also need to be validated whenever needed.

Your implementation should be developed using HTML5 and JavaScript techniques you have learned in this unit.

Your assignment website should have:

1. An index page (index.html) displays the project information and provides a link to allow the user to start the survey. For the project information, you need to provide an introduction (100 - 200 words) to the survey topic. The "link" will direct the participant to the survey form page. Figure 1 below is an example of the index.html.

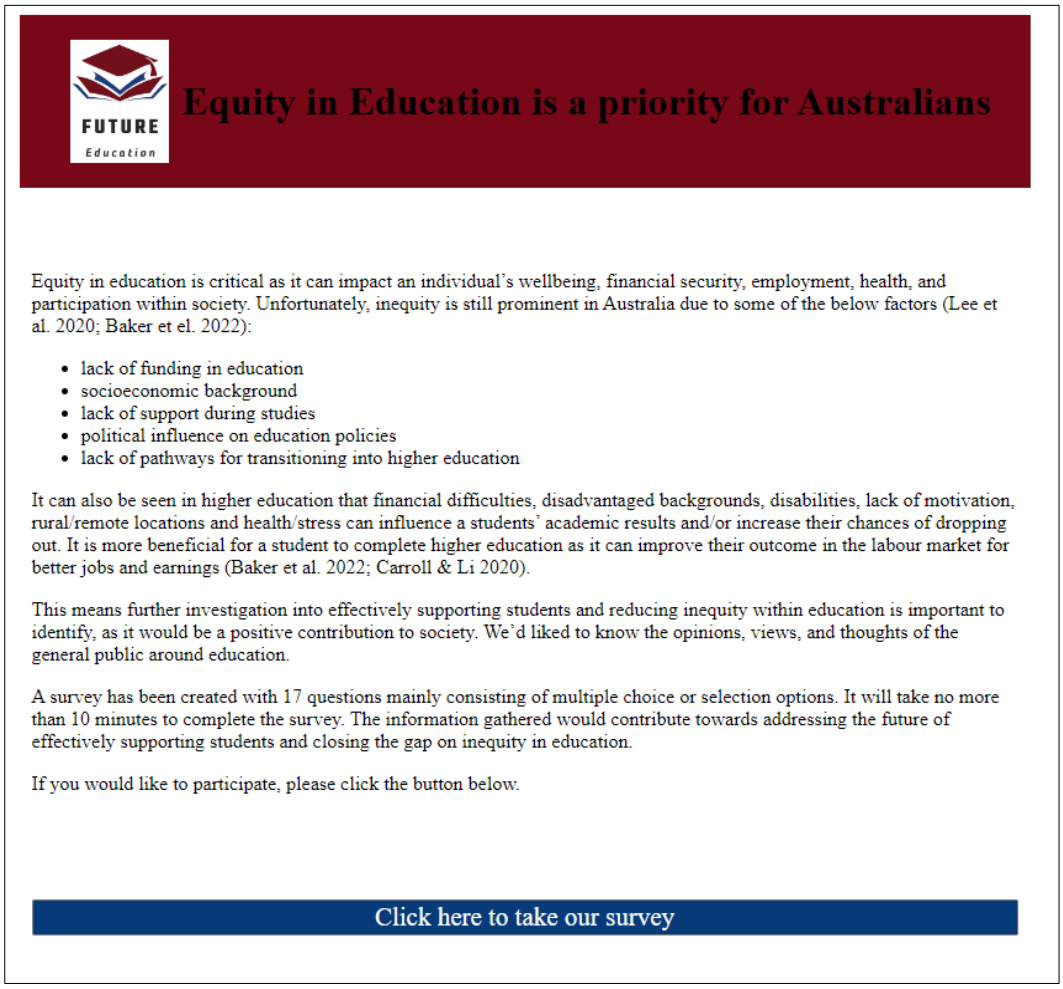

Figure 1 An example of the index.html

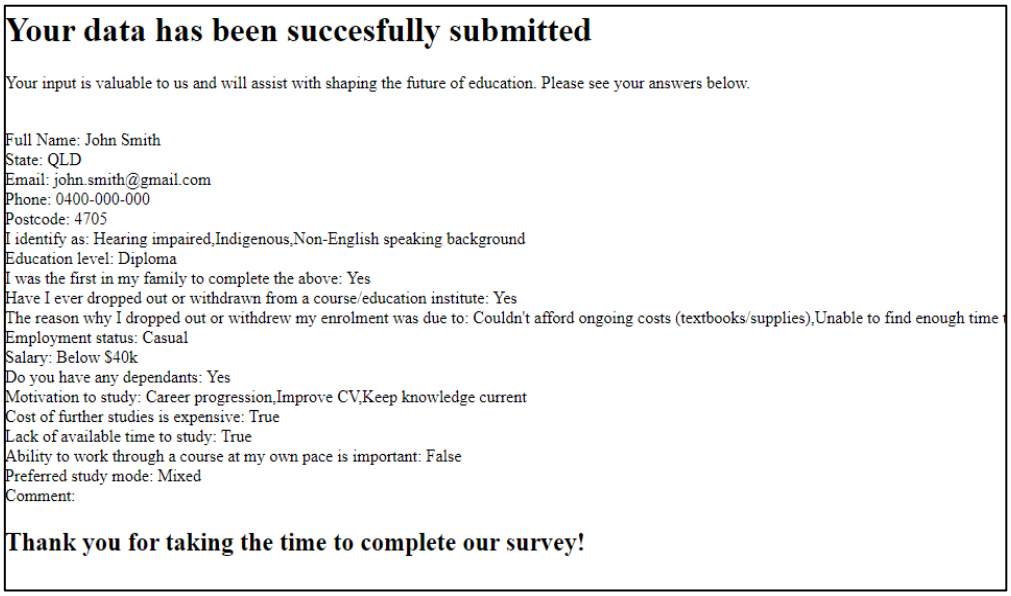
(Note, the link can be implemented in either: an HTML link, an image as a link, or a button as a link)

2. A form page (e.g., survey.html) containing all the form elements for the participant to fill out. The form questions depend on your design.
3. After the form is submitted, your page should display the data entered by the participant and then display a "Thank you" message. The below screenshot is an example.



Your data has been succesfully submitted

Your input is valuable to us and will assist with shaping the future of education. Please see your answers below.

Full Name: John Smith
State: QLD
Email: john.smith@gmail.com
Phone: 0400-000-000
Postcode: 4705
I identify as: Hearing impaired,Indigenous,Non-English speaking background
Education level: Diploma
I was the first in my family to complete the above: Yes
Have I ever dropped out or withdrawn from a course/education institute: Yes
The reason why I dropped out or withdrew my enrolment was due to: Couldn't afford ongoing costs (textbooks/supplies),Unable to find enough time t
Employment status: Casual
Salary: Below $40k
Do you have any dependants: Yes
Motivation to study: Career progression,Improve CV,Keep knowledge current
Cost of further studies is expensive: True
Lack of available time to study: True
Ability to work through a course at my own pace is important: False
Preferred study mode: Mixed
Comment:

Thank you for taking the time to complete our survey!

4. You should define your stylesheet for the pages. You may have other files (like CSS, and images) if you like. All pages need to be responsive and mobile-friendly.

Note, in a real-world application, the form handling should be processed in an action page that requires the server-side scripting language such as PHP. The PHP techniques will be covered in the later weeks. This assignment doesn't require the form data to be recorded anywhere. You just need to read the data from the form inputs and display the data on the same document.

Where to find help

The week 1 and week 2 hands-on projects have all the required resources for Assignment 1.

What you must submit

You are required to submit a single zipped file (.zip) containing all your project folders and files.

Marking Criteria

Item	Marks (out of 30)
Page Structure HTML documents should be correctly structured – this includes making sure all opening tags have associated closing tags. Your headers should be properly defined including all required metadata you have been using during the hands-on projects. All HTML documents should have appropriate indentation and spacing.	3
Library Reference You need to correctly reference the stylesheet and JavaScript.	1

FORM Elements and Validation
• Mandatory input fields are correctly used and validated
  ○ Name field (1)
  ○ State selection field (1)
  ○ Email field (1)
  ○ Phone field (1)
• Input text field (0.5)
• Select implemented (1)
• Radio buttons implemented (1)
• Checkboxes implemented (1)
• Textarea implemented (0.5)
	8

JavaScript function • Meaningful variables (0.5) • Text inputs read correctly (0.5) • Select options read correctly (2) • Radio button input read correctly (2) • Checkbox input read correctly (2) • Textarea input read correctly (1) • Display message correctly (1) • Thank you message displayed (1)	10

Site Pages
• Index page
  ○ Introduction clarity (2)
  ○ Link to the survey page (0.5)
  ○ Layout and appearance (colour, font, etc.) (0.5)
• Form page
  ○ Questions are relanvant (2.5)
  ○ Layout and appearance (colour, font, etc.) (0.5)
	6

Responsiveness • All pages are responsive and mobile-friendly	1
CSS Style • Custom stylesheet used, referenced and loaded	1
Total	30
